## INTERNATIONAL DAY OF

# Clean Air for Blue Skies

Today is International Day of Clean Air for Blue Skies with the 2022 theme: 'The Air We Share'. Here is how our focus on decarbonising our mines and operations has contributed to a bluer, greener and healthier future.

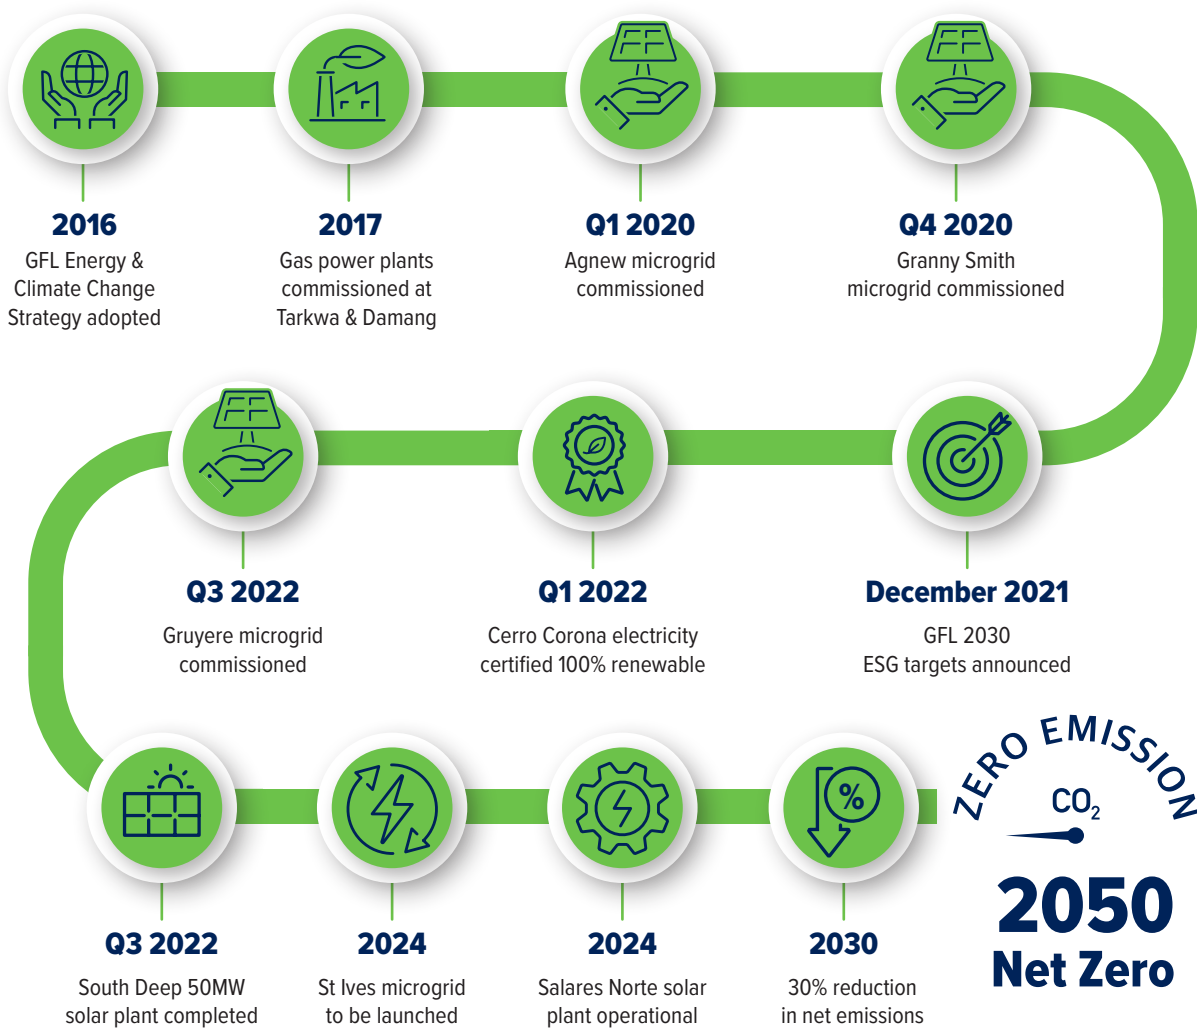

Gold Fields commenced its decarbonisation journey in 2016 and – as the roadmap below shows – has regularly launched new projects to help us on this journey. Last year we set the final target for this journey: **Net Zero by 2050** and, to get us there, a **30% net reduction in carbon emissions by 2030**.

Last year, through our decarbonisation programme we reduced our CO<sub>2</sub> emissions by **306kt** and saved **1,208TJ** of energy – enough to power over **31,000 houses** for a year

Our 2030 and 2050 targets have now been listed on the website of the Science-Based Targets initiative (SBTi), a joint project by the United Nations Global Compact, the Carbon Disclosure Project (CDP), the World Resources Institute and the World Wildlife Fund (WWF). Our targets are published at: <https://sciencebasedtargets.org/companies-taking-action#table>

## Gold Fields' decarbonisation journey

The South Deep solar plant is set to be fully commissioned next month.

*Our Purpose*  
Creating enduring value beyond mining
